DETAILED ACTION

Drawings

The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, "each groove penetrat[ing] into the thickness of the body of the screw" must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Application/Control Number: 10/614,496

Art Unit: 3733

Claim Objections

Claim 5 is objected to because of the following informalities: "grooves varies" is incorrect usage. Appropriate correction is required.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claim 5 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

A broad range or limitation together with a narrow range or limitation that falls within the broad range or limitation (in the same claim) is considered indefinite, since the resulting claim does not clearly set forth the metes and bounds of the patent protection desired. See MPEP § 2173.05(c). Note the explanation given by the Board of Patent Appeals and Interferences in Ex parte Wu, 10 USPQ2d 2031, 2033 (Bd. Pat. App. & Inter. 1989), as to where broad language is followed by "such as" and then narrow language. The Board stated that this can render a claim indefinite by raising a question or doubt as to whether the feature introduced by such language is (a) merely exemplary of the remainder of the claim, and therefore not required, or (b) a required feature of the claims. Note also, for example, the decisions of Ex parte Steigewald, 131 USPQ 74 (Bd. App. 1961); Ex parte Hall, 83 USPQ 38 (Bd. App. 1948); and Ex parte Hasche, 86 USPQ 481 (Bd. App. 1949). In the present instance, claim 3 recites the broad recitation "20"

Application/Control Number: 10/614,496

Art Unit: 3733

degrees to 40 degrees", and the claim also recites "preferably about 25 degrees" which is the narrower statement of the range/limitation.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1-11 are rejected under U.S.C. 103(a) as being unpatentable over U.S. Patent No. 6,402,757 to Moore, III et al. in view of U.S. Patent No. 6,306,140 to Siddiqui. Moore discloses in figure 5 a compression screw for a fractured bone comprising a proximal portion having an enlarged head 16, a threadless intermediate portion 46, a distal portion 48, grooves 23 and 32 and preparation means 34.

Moore fails to disclose that the head is threaded. Siddiqui teaches a compression screw for a fractured bone including an enlarged head having threads. It would have been obvious to one of ordinary skill in the art at the time the invention was made to thread the proximal head to increase grip with the proximal bone portion.

Column 3, lines 22-24 of the Moore reference discloses the angle of the cutting edges to be between 15 and 30 degrees.

Moore fails to disclose whether or not the grooves have a variable or a constant depth.

(Inherently, the device must have one or the other if not both.) It would have been obvious to one of ordinary skill in the art at the time the invention was made to make the grooves 23 to have

•

a variable depth such that as the diameter of the head increases, the depth of the groove also increases to receive more material that is cut away. Furthermore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to make the depth of the grooves 32 constant. Grooves 32 cut into the body of the fastener.

Figure 5 illustrates a first tooth 34 between the bore and the groove. The opposing groove 32 is not illustrated and hence a second tooth 34 is also not illustrated. Nevertheless, it would have been obvious to one of ordinary skill in the art a the time the invention was made to make a second tooth 34 adjacent the other grove 32 to cut into hard tissue.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to D. Jacob Davis whose telephone number is (571) 272-4693. The examiner can normally be reached on M-F.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Eduardo C. Robert can be reached on (571) 272-4719. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
